

CO AND TRI-GENERATION ENERGY WITH NO UPFRONT CAPITAL

The energy required to power your commercial premises can be inefficient, unreliable and expensive. That's why more and more building and facility owners across Australia are installing onsite co and tri-generation plants.

Integrated into your facility, co and tri-generation is an efficient, decentralised energy technology that helps reduce your energy costs, ensure energy supply, and minimise your carbon footprint.

Benefits of Co and Tri-Generation

There are many benefits associated with co and tri-generation energy, including:

- Reduced energy costs
- Improved energy efficiency by re-using waste for heating and cooling
- Lower carbon energy for powering, heating and cooling your facility
- Protect against future electricity price rises
- Certainty of electricity supply
- Promote your green initiatives to staff and customers
- Improve the NABERS energy efficiency rating of your facility where applicable

Co and Tri-Generation as a Service

At Northquest, we offer a tailored Managed Service Agreement (MSA) that allows you to install a state-of-the-art co or tri-generation plant on your commercial premises with no upfront capital.

This means your co or tri-generation installation comes out of your operational budget, rather than your capital budget. Northquest pays for the installation, operation and maintenance costs, and you simply pay a regular monthly tariff over an agreed term.

This enables you to preserve credit lines without impacting your balance sheet, and eliminates the need to worry about your technology becoming obsolete or your equipment breaking down.

What's more, we can help you access government incentives and grants to reduce your costs further, plus we only use accredited service providers and premium quality equipment to ensure longevity and maximum value for money.

Why choose Northquest?

Northquest is an innovative solutions management company that opens up new growth opportunities for our clients. We enable businesses and governments to improve the critical infrastructure necessary to support and grow their organisations.

We do this by owning and managing infrastructure and systems on your behalf via our managed service solution, delivering improved outcomes to you and your business. We are also able to take on the ownership of depreciating assets on your behalf such as office fit outs, IT&T and software products. Our focus on sustainability helps our clients reduce their energy consumption, reduce their carbon footprint and reduce their overall costs.

Our team is comprised of industry experts with unrivalled capability across a broad range of industries, which means we understand your challenges and customise our solutions to suit your specific needs.

“ Case study

Northquest financed the installation and total capital cost of a \$1.2 million tri-generation plant for a major entertainment complex. The client then negotiated a long-term gas supply contract, which delivers lower energy costs for power, heating and cooling throughout the complex. ”
